The Last Storytender: finishing the Prologue in Tilewright

A work order for the next agent. Written 2026-11-04 after a full play test of branch **all-merged** (commit 261aead, the owner works in a local worktree called **tls-wire** that tracks this branch). It lists every mechanic that is missing or broken, every visual problem (draw order, ledges, the beige void), the art that still has to be made, where in the code each fix goes, and how to prove each fix works.

How to use this document. Read sections 1 and 2 first (how the port works and how to test). Then work through section 9 (suggested order). Every task has an ID (M-xx mechanics, S-xx story, V-xx visuals, A-xx art). Each task says: what is wrong, what the original game did (with the Godot file to read), where to change the port, and an acceptance check. When a task is done, add an automated check for it to a test in tools/port/*.mjs.

Ground rules from the owner.

- Play/test before pushing. Report honestly: if something fails or was skipped, say so.
- Commit messages end with the attribution lines the session gives you. Never open a pull request unless the owner asks.
- Work on branch **all-merged** (push with `git push -u origin all-merged`).
- The Godot game in the same repo is the reference: the port should behave like it ("1 for 1"). tools/port/FLOW_SPEC.md is a condensed rule book extracted from the Godot scripts; read it fully before starting.
- Keep the original game's quirks listed at the end of FLOW_SPEC.md unless the owner says otherwise.

Summary of the play test

Area	Result
Automated tests (play, combat, forge, pip, maud)	**59 of 59 checks pass**, 0 script errors. The three memories (forge, Pip, Maud) and their bosses can be finished start to end.
Wider tour (new test tools/port/tour_test.mjs)	6 of 14 pass: dash, echo recording, map fast travel, Garrick restoration, Weighing Room door, region names. Failing: creep/lantern speed, pits, crumpling, binder use, equipment, Margin Gate, Proof Room door, save/Continue.
Echo (owner could not get it to work)	**Works in Garrick's memory** (verified live: R starts, R again makes a ghost that repeats the path and holds plate_a down). Problem is feedback: no on-screen message, only a tiny "recording 9s" tag over the head. Outside the memory it is off until the memory is finished (by design), and the 9 overworld echo plates do nothing. See M-01.
Censor bars (black "redaction" bars)	Work in the forge only. The 6 overworld bars have no script and **no collision**: you walk through them and the lantern does nothing. See M-02.
Collision	On the overworld all 8 story gates, 6 censor bars and 17 sentence stones have **no collider**. 94 of 686 props have none either. See M-03.
Overworld feel	Walking measured 2.1 cells/s on the overworld and 4.0 in the forge (target 4.2). Most likely the test machine running the big scene slowly; check on a real machine (M-04).
Visuals	Beige "paper" void fills every gap and the outside of every map; back ledges of grass have no edge line; several draw-order and label problems. Section 6.

1. How the port works

The Tilewright project is **generated**. Do not hand-edit files in tilewright/ and expect them to survive: the porter rebuilds that folder from the Godot game plus the port tools. Change the tools, rebuild, test.

Path	What it is
/home/user/the_last_storytender	Game repo (GitHub calebwilsonit-tech/The_Last_Storytender). Godot 4.3 sources in scripts/, scenes/.
tools/port/run_porter.sh	Builds ./tilewright. `SKIP_CAPTURE=1` reuses the Godot captures in .port_work (use this; captures need Godot). Also NO_LUDO / LUDO_PARTS switches for the art passes.
tools/port/porter.ts	Main builder: tileset, maps (buildMap ~line 210), entities, the player kit (~line 480), prefabs, input, screens.
tools/port/overworld.ts	What overworld objects DO: signs, NPC talks, chests (+ site guard), portals, Margin Gate, restorations.
tools/port/forge.ts, pip.ts, maud.ts	Each memory's objects and bosses. Good examples of how to wire puzzles (plates, gates, sentence stones, word blocks).
tools/port/screens.ts	HUD, title, difficulty, pause, settings, binder, world map (menus are data, built here).
tools/port/scripts/*.script.ts	Game scripts copied into the project (Storytender, Error enemies, Critic, Spoiler, ColdShoulder, Plate, StoryGate, Redactor, WordBlock, Guest, PitCover, ...).
tools/port/FLOW_SPEC.md	The rule book of the Godot game (story beats 0-17, numbers, objects, enemies, items, dungeons, save).
tools/art/*	Art pipeline: ludo_retile.py (floor tiles + ledge variants), ludo_ledges.py (back-ledge line), ludo_sides.py (cliff faces), cutout/pieces/sheet tools.
art/incoming2/WIRING_REPORT.md	What the Ludo art covers and the 16 pictures that need redoing (section 7 repeats them).
/home/user/calebwilsonit-tech/tilewrite	The Tilewright engine (owner's; push access). Storytender plugin: packages/plugins/storytender/src (echo.ts, sentence stones, checkpoints...).

Engine rules that shape every fix

- Scripts use `defineScript({settings, start, update})`; per-entity memory is `me.state`; shared state is `game.vars` (story flags live here and are saved).
- **A script cannot read another entity's state.** Talk between objects through game.vars flags or tags (`game.findAll('tag:x')` gives positions/components, not state). This is why plates write `plate_a` and gates read `needs: "plate_a+plate_b"`.
- Built-in behaviours: health (state:health hp/dead), meleeAttack (hits only within 1.2 levels), damageOnTouch, rangedAttack, projectile, sentenceStone, textBlock, checkpoint (vars `lit:<scene>:<id>`, emits "rested"), echoRecorder, npcTalk, animator (needs an asset name), walkTo (needs a body).
- Change scene in code with `sim.runtime.travel = {scene, spawn}` (tests) or game.travel in scripts.
- Units: 1 cell = 35.8 ground px of the Godot game; Godot px ranges / 32 give cells. Storytender walks 4.2 cells/s.
- Dialogues are JSON trees built by the Talk helper (t.lines, t.when, t.set, t.seq); w.write(name, data) writes assets/dialogues/<name>.json.

2. How to build and test

```
cd /home/user/the_last_storytender
SKIP_CAPTURE=1 TILEWRIGHT=/home/user/calebwilsonit-tech/tilewrite tools/port/run_porter.sh
# the editor must be built once per engine change:
(cd /home/user/calebwilsonit-tech/tilewrite && npm run build -w @tilewright/editor)
# run one test at a time (each loads all art, ~4-5 min):
TILEWRIGHT=/home/user/calebwilsonit-tech/tilewrite xvfb-run -a node tools/port/forge_test.mjs \
```

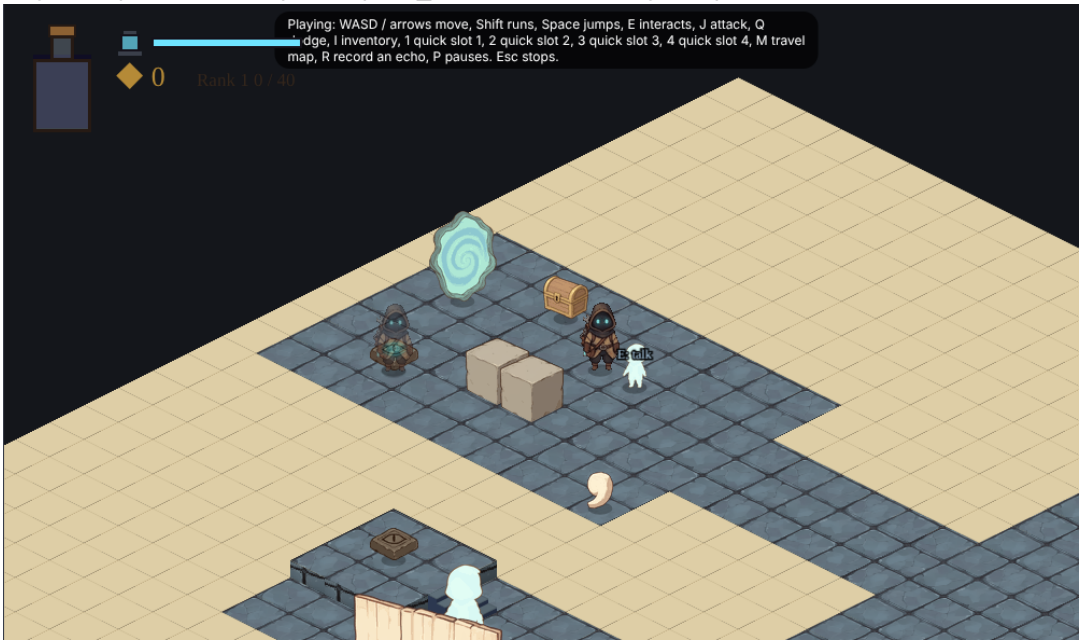

```
/home/user/the_last_storytender/tilewright <out_dir>
```

- Tests drive the real Tilewright editor through Playwright/Electron. In the page, `window.__play.sim` is the running game: `sim.world.withTag('player')`, `sim.runtime.vars`, `sim.runtime.ui.stack`, `sim.runtime.dialogue.view`, `sim.map`.
- Existing tests: play_test (signs, crystals, chest, pickup, post, dummy, lantern, Garrick restored look), combat_test (enemies, drops, proofreading), forge_test, pip_test, maud_test (each memory start to end).
- New tests added in this pass: **tour_test.mjs** (wide mechanics tour; its area screenshots are broken because the save/Continue step leaves the game on the difficulty screen; move that step to the end), **shots_test.mjs** (screenshots of 27 spots in every scene), **echo_test.mjs** (records an echo in the forge onto plate_a), **probe_test.mjs** (overworld speed and a collider count per object type).
- Run at most two tests at once. Long waits: use until-loops, not chained sleeps.
- Keys: WASD move, Shift dash, E interact, J strike, Q lantern (hold), C or Ctrl creep, R echo, F use quick item, G switch, 1/2/3 styles, I/Tab binder, M map, P pause.

3. The three problems the owner reported

3.1 "I couldn't get the echo to work"

Live test result: in Garrick's memory the echo works. Steps: press R (a red "recording 9s" tag appears above the Storytender), walk, press R again. A pale ghost appears at the start point and repeats the walk, then stays where it ended (ending "hold"). It counts on plates: plate_a went to 1 and its gate opened.

Forge, after recording: the ghost (bottom, behind the wooden gate) stands on plate_a and holds it; the Storytender is near the chest.

Why it seems broken to a player:

- **No feedback text.** The engine sends `message` events ("Recording... press Echo again to finish.", "Echo made.", "You cannot make echoes yet.") but the port's HUD does not show them. On the overworld before the forge is done, R does nothing visible.
- **Off on the overworld until the forge memory is finished** (flag memory_done). Correct per the original, but the player is never told. Godot narrates RETURNED with "echo on (R)" when you come back (beat 4) - not ported.
- **Overworld echo plates are inert** (9 EchoPlate entities, no script), so there is nothing to use an echo on outside the memory.
- The ghost and the memory figures are both pale cyan-white, so the ghost is hard to pick out.

Fixes: see M-01.

3.2 "The censor bars don't work"

The forge's bar works (forge.ts decorateForge: script_Redactor, collider, the lantern lifts it). The 6 overworld Redactors (FLOW_SPEC 3, char R, "the way up") get nothing in overworld.ts: no script, no collider, no lantern progress. Proof Room bars too. **Fix: M-02.**

3.3 "Some of the collision doesn't work"

Collider count on the overworld (probe_test.mjs): StoryGate 0 of 8, Redactor 0 of 6, SentenceStone 0 of 17, EchoPlate 0 of 9 (plates should not block; fine), Error enemies use bodies (fine), Prop 592 of 686. So gates, bars and stones can be walked through. **Fix: M-03**, which also asks for a sweep of which props lack colliders.

4. Mechanics to fix or port (M)

Priority: **P0** blocks finishing the Prologue, **P1** needed for a faithful port, **P2** polish. Godot files are in scripts/.

M-01 [P0] Echo: feedback, overworld plates, RETURNED narration

Now	Recorder works (porter.ts ~503 echoRecorder seconds 9; Storytender.script.ts ~78 sets capacity: memory_done ? (echo_third ? 3 : 2) : echoesHere). No messages shown. Overworld plates inert.
Original	player.gd / level_base.gd echo toolkit; recordings under 20 frames are discarded; echoes lure idle enemies; puzzle_sites.gd "echo" sites: two plates pressed at once open the WEIGHED gate that seals a chest.
Do	1) Show the engine's message events as a toast in the HUD (screens.ts hud(); add a toast element bound to the latest message, 2.5 s). 2) Narrate RETURNED (story.gd constant) on coming home from the forge, mentioning R. 3) Give overworld EchoPlates script_Plate (like forge.ts) with flags plate_<site>_<n> and wire echo sites (see S-06). 4) Discard recordings shorter than 20 frames (engine echo.ts or a script). 5) Tint the ghost (e.g. gold) so it differs from memory figures. 6) Echoes lure idle Errors (Error.script.ts: treat tag:echo like a noise source).
Check	echo_test.mjs passes; new check: on the overworld after memory_done, two echoes hold both plates of an echo site and its chest opens; pressing R before memory_done shows "You cannot make echoes yet."

M-02 [P0] Censor (Redactor) bars everywhere

Now	Only the forge bar works. Overworld (6) and Proof Room bars are decoration.
Original	FLOW_SPEC 3: bar 3 cells, blocks; lantern beam on it adds dt/1.4 progress (decays 0.4/s); at 1 it is revealed and fades 1.6 s; not saved. REDACTOR_HINT within 150 px once per scene; REDACTOR_OPEN on reveal. Quirk 7: all say "the way up".
Do	In overworld.ts give class Redactor the same treatment as forge.ts: script_Redactor + COLLIDER(3, 0.7, 2) oriented along the bar, tag redactor, add hint/open narration. Check Redactor.script.ts does progress/decay/fade (forge uses a simpler flag version). Not saved: reset on scene load.
Check	Walk into an overworld bar: blocked. Hold the lantern on it ~1.4 s: it fades and you can pass. Reload scene: it is back.

M-03 [P0] Collision sweep

Now	No colliders on overworld StoryGate, Redactor, SentenceStone; 94 props without.
Do	Gates: COLLIDER along their axis, disabled while open (script_StoryGate already toggles collider.enabled in the forge). Stones: small 0.8 x 0.8 collider. Print the names/kinds of the 94 props without colliders (probe_test.mjs, extend it) and decide each: trees/houses/forge/oven/posts/signs/chests block, flowers/grass tufts do not. Also walk-test: cliffs, the town wall, water, the map edge (once the paper tile is gone, V-01, the edge must still block).
Check	probe_test prints 0 blocking objects without a collider; a test walks into a gate, a stone, a house and a tree and does not pass.

M-04 [P1] Walking speed on the overworld

Now	playerController.speed is 4.2 but the Storytender covered 2.1 cells/s on the overworld (forge: 4.0). The settings are right, so the overworld scene is probably running at half rate in the headless test (686 props, 46 enemies).
Do	Measure frame time on a real machine (owner's). If it is slow there too: profile (sprite count, lights, enemy scripts doing findAll every frame), cull off-screen entities, stream enemies as Godot did (spawn 560-900 px away, free beyond 1500). Make tests measure speed from sim time, not wall time.
Check	Walking 1 s of sim time covers ~4.2 cells; creep ~2.3; lantern ~3.0; lantern + creep ~1.7.

M-05 [P1] Plot holes (pits) and falling

Now	Pits are flagged (FLAG.PIT, PitCover script). Not verified: the test could not find a pit near the start. Body ledge mode is "fall".
Original	Fall 0.55 s, fall damage 8 (story) / 15 (normal), non-lethal (leaves 1 ink), respawn at last safe position, FALL_FIRST narration once per scene.

Check	Test: place her next to a known pit cell (scan sim.map flags), walk in; ink drops by 8/15, she reappears on the last safe cell, narration once.

M-06 [P0] Crumpling (death) and respawn

Now	Setting hp 0 by hand did not respawn her (test left her at hp 0). Needs a real-damage check; the respawn rules are not ported.
Original	After 2.2 s. Story: +100 ink at the safe position. Normal: lose floor(M x 0.15 / 5) x 5 Mnemosynth dropped as crystals of 5 where she fell, +50 ink, respawn at the last post rested at (or nearest lit, or (87,53) in town, or start), post cell + (0,1); enemies, echoes, arenas and crumble tiles reset; CRUMPLED narration. Dungeons: last lit post in the dungeon, else start.
Do	Storytender.script.ts: watch state:health dead, run the timer, apply difficulty (var difficulty), travel to the respawn point, reset (emit the same reset as resting). Health behaviour onDeath must not delete the player.
Check	Let a Bare hit her to 0 on Normal with 100 M: 15 M lands as 3 crystals at the spot, she wakes at the last rested post with 50 ink.

M-07 [P0] Binder: using items, equipment, quick slots

Now	E on an Ink Vial card in the binder did not heal (hp 30 -> 30). No equipment (bindings/amulets) and no stat effects. Two quick slots exist (F/G).
Original	item_*.gd, FLOW_SPEC 5: consumables (ink_vial +45, warm_loaf +60, ink_flask full, lantern_oil +100, eraser_crumbs thrown 150 px for 5 dmg within 85, sticky_note sleep 6 s within 240, ...). Bindings and amulets give stats: armor, speed, dash_cd, invuln, dmg, reach, lantern_eff, regen, mnemo, luck, renown.
Do	Wire the binder card click/E to the engine's use-item action (screens.ts binder()), and item effects (items.json + a script reading an "item-used" event). Add equip slots binding/amulet to the binder and apply stats in Storytender.script.ts (speed, dash cooldown, damage, reach, lantern drain, armor via health).
Check	Use Ink Vial: +45 ink and count -1. Equip Softcover Binding: stat shows and effect applies. Quick slot F uses the item.

M-08 [P0] Save, load and Continue

Now	"Save and return to title" then the first title button started a New Game (difficulty screen); Mnemosynth was not restored. Title shows Continue only when {host.hasSave} (screens.ts 146); pause saves to slot "auto", Continue loads slot "latest".
Do	Find why hasSave is false after saving (editor play may not persist saves; check the engine's saveGame/loadGame actions and what "latest" resolves to). Save everything in FLOW_SPEC 8: renown, mnemosynth, ink, flags, inventory, equipment, quick slots, restoration, town_published, difficulty, spawn cell, last_post, dungeon_last_post, attributes, free points. Autosave on resting at a post.
Check	tour_test save step (move it to the end): after Continue, Mnemosynth 123 and position match.

M-09 [P1] Lantern posts: the Index (attributes, workbench, shop, travel)

Now	Posts light and rest (checkpoint), fast travel by map works. No Index menu.
Original	index_hub.gd: Revise Your Draft (attributes ink/grit/pen/wit/foot/luck, cost int(20 + 4p + 0.08p^2), 15 free points first time), Workbench (recipes), Narrator's Stall (SHOP_STOCK, sell at 40%), Travel. INDEX_FIRST narration once. Rest toast "You rest by the lantern. The page resets: the Errors return."
Do	New screen in screens.ts opened on the checkpoint's rested event; data from dump_data (.port_work/data). Ink max = 100 + 10 x (rank-1) + 2 x ink attr.

M-10 [P1] Ranks, renown, Mnemosynth economy

Now	HUD shows "Rank 1 0 / 40". Renown is added by chests/kills. Rank up not verified.
Original	Rank steps 0, 40, 100, 180, 280, 400, 560, 760, 1000, 1300, 1650; rank up +10 ink max and toast "Rank N! The ink bottle grows." Region discovery +10 M +6 R and "Discovered" toast for regions other than m/s/o.

M-11 [P1] Player kit details

Do	Check against FLOW_SPEC 2: 3-hit combo within 0.75 s with a finisher (3.5 dmg, +16 reach); sneak attack x2 on unaware/asleep enemies; noise radius rules (enemy hearing); knockback stun 0.18 s cancels dash; dash 0.2 s, invulnerable 0.32 s, cooldown 0.75; armor and invulnerability 0.9 s after a hit; format styles 1/2/3 after Maud (ported in the memory; check on the overworld).

M-12 [P1] Enemies still missing behaviour

Now	Bare, Mite, Dangler tested. Run-on, Censor, Ellipsis exist in Error.script.ts but spawn only after Pip/Maud restorations - not tested.
Do	Test Run-on puddle slow (puddle_slow 0.55), Censor front bar dropped by the lantern for 5 s, Ellipsis blink 90-140 px and pinned by the lantern; ENEMY_INTRO narration for kinds 2-5 once each; alarm others within 170 px; chase/search/return; enemy streaming and 120 s respawn after a kill; drop tables (drop_tables.gd).

M-13 [P1] HUD and narration

Do	Toasts (M-01). Centre narration lines (story.gd narrate) as fading centre text, not a dialogue box. Boss health bar (bosses use showBar false; add a top bar with the boss name for Critic, Spoiler, Cold Shoulder, Scissor-Man). Tutorial cards "move" and "quill" (tutorials.gd). Ink bottle fill (the HUD bottle draws as an empty dark box, V-06).

5. Story flow to finish (S)

Status of every story beat in FLOW_SPEC section 1:

#	Beat	Status on all-merged
-	Title, difficulty	Works. Continue broken (M-08).
-	Intro book (6 spreads, typewriter 46 chars/s, Esc skips, flag book_seen)	**Missing** (S-01).
-	Wake-up: INTRO_WAKE, tutorial cards, two INTRO lines 5.6 s apart, start (16,54)	Start position right; narration and cards **missing** (S-01).
0	Signs, town sign, lore stones	Works.
1-2	Garrick ghost talk, forge flame -> memory	Works.
3	Forge memory, First Sword	Works (forge_test).
4	Back: RETURNED narration, echo on	Echo on: yes. Narration **missing**.
5	Garrick restoration cinematic, wave	Works (look changes); wave visuals simplified - check S-04.
6	Quill and the lesson (dummy x3, dash once, lantern 1.2 s)	Not verified - add a test.
6d	Lesson rewards: +20 M, hardcover_binding, eraser_crumbs x2, BINDER_HINT, REDACTION_NOTICED	Not verified.
7-8	Pip's book -> memory -> bookmark	Works (pip_test).
9	Pip restoration, Run-on + Dangler spawn	Dangler release tested; restoration talk not tested.
10-11	Maud's oven -> memory, format styles	Works (maud_test).
12	Maud restoration, warm_loaf x3, Censor + Ellipsis spawn	Not tested.
13-14	Rift appears at (88,53) when all three restored; "Step into the tear"	**Missing**: no rift, so the Cutting Room has no entrance (S-02).
15	Scissor-Man boss, Thimble	**Missing**: scene exists (scissor.scene.json) with art only, no logic (S-03).
16	PUBLISHED narration, town wave, town_published	**Missing** (S-04).
17	Margin Gate: locked / renown < 220 / opens	Locked text works; never opens because 16 is missing. Once published, check the renown branch (overworld.ts ~146).

S-01 [P1] Intro book and first wake-up

Original	intro_book.gd (6 spreads: idea, tender, editors, doodle, you, blot), tutorials.gd, main.gd intro.
Do	A screen with 6 pages of text + art (captured spreads or new art A-12), typewriter reveal, Esc skips, sets book_seen, then overworld. On first arrival (intro_done not set) run INTRO_WAKE and the tutorial cards.

S-02 [P0] The rift and the Cutting Room entrance

Do	In overworld.ts add a rift prop at (88,53), visible when restored_garrick + restored_pip + restored_maud and not scissor_done (script_Flagged showWhen), npcTalk "Step into the tear" (scissor_rift_enter dialogue), RIFT_NARRATION on first appearance, script_Gateway to scenes/scissor.scene.json, return (88,54).

S-03 [P0] Scissor-Man and the clipboard

Original	scripts/editor_scissor.gd, scissor_man.gd; plan docs/dungeon_plans/scissor_editorial_floor.png.
Rules	Clipboard: strike clippings to cut/copy, V pastes a patch that lasts 18 s (26 story). The Scissor-Man cuts along telegraphed lines; a cut that crosses a patch jams him for 5.5 s; he can only be hurt while jammed; 90 HP; phases at 66% and 33% (faster, more lines). RETURN_CELL (24,14) + offset. Win: scissor_finale dialogue, Thimble, scissor_done, +60 M, +40 R, back to (88,54).

Do	New tools/port/scissor.ts like pip.ts (decorate + extras + boss script Scissor.script.ts). The engine cannot let a script read another entity's state: patches announce themselves by tag and position; the boss tests line crossings against tag:patch positions. The floor should be the editorial floor (now grass, V-08).
Check	scissor_test.mjs: paste a patch on a telegraphed line, he jams, strike lowers HP, phases trigger, win returns home with scissor_done.

S-04 [P0] Publishing the town

Do	On return with scissor_done and not town_published: narrate PUBLISHED, play the town-wide wave (radius 2600 px from the rift), set restored_town and town_published; all ghost houses/forge/sign/NPCs become coloured. Godot restoration is a growing circle (radius 470 + 190 soft edge, 5.5 s); the port can switch sprites by distance over time (script on a controller that sets a var per ring, Flagged objects read it).
Check	After the Scissor-Man: every ghost prop in Thistledown shows its coloured art; the Margin Gate gives the renown text below 220 and gate_open at 220+.

S-05 [P1] Riddles and vault trials

Original	FLOW_SPEC 3.5; vault_trial.gd, trial_games.gd. r0 stone (39,67), gate (37,65), chest (34,65) tier 1; r3 stone (58,56), gate (60,54), chest (63,54) tier 3. "Attempt the trial" -> word minigame; win: +(4 + 4 tier) R, riddle_id, gate opens, RIDDLE_OPEN; lose: "The words slip away. Try again whenever you like."
Do	Port the minigame as a screen (multiple choice of words is simplest; check trial_games.gd for the exact games).

S-06 [P0] Puzzle sites (guard the overworld chests)

Now	overworld.ts ~245 already seals a chest while site_<id> is unset, but nothing ever sets site_<id>, so **guarded chests can never be opened**.
Original	puzzle_sites.gd and SITES in .port_work/data: echo (3): gate "WEIGHED" + two plates pressed at once. words (5): three sentence stones, a sign gives the answers, all good -> stones lock and bridge cells # become floor. arena (3): gate "PROOF", trigger closes it, waves of enemies, opens after the last wave. crumble (2): causeway cells crack 0.8 s after stepping, hole 5 s, solid for good on reaching the chest. Solving sets site_<id> and +4 R.
Do	Reuse forge.ts plate/gate wiring for echo sites, pip.ts sentence-stone wiring for words sites (the 17 overworld SentenceStones and 8 StoryGates belong to these), a controller script for arenas, a crumble tile script.
Check	One test per site type; every guarded chest in CHESTS can be opened after its site.

S-07 [P1] Side dungeons: Weighing Room and Proof Room

Now	Weighing Room door works (needs memory_done) but the room has no logic. Proof Room: the test found no door at (13,25) (needs has_quill). Both scenes have art only.
Original	scripts/side_weighing.gd (ECHO_GATES, LATCHED, WEIGHTS; rooms Tare, Relay, Night, Pan, Counterweights; the Locket gives echo_third; reward hourglass_of_drafts). scripts/side_proof.gd (lantern-revealed PLAQUES give the answers to 3 STONES: ALIVE, UNWRITTEN, WELCOME; reward censors_monocle). Plans in docs/dungeon_plans/side_weighing_room*.png and side_proof_room.png.
Do	tools/port/weighing.ts and proof.ts. Fix the Proof door (check PORTALS cell vs. the Prop kind 8 node; near(cell, p.cell, 0.8) may miss).

S-08 [P2] Memory chests, posts and blocks

Now	Inside the memories, chests (Prop kind 18) and posts (kind 16) are decoration; IsoBlocks: check collision.
Do	Give them the overworld chest/post wiring (rewards from the Godot memory scripts; dungeon posts are the dungeon respawn points, see M-06). Pause menu in dungeons adds "Travel to a lantern" and "Restart this dungeon".

6. Visual fixes (V)

V-01 [P0] Remove the beige "sand" around and between maps

Cause	porter.ts buildMap (~line 236): every cell that is not land, in a map 4 cells bigger than the level, is filled with paperTile ("page edge (paper)", t_paper, colour #decea6) and flagged BLOCK. addPaper() ~line 203. That is the beige tile seen outside the map on all sides and in every gap inside the overworld and the memories.
Do	Leave those cells empty instead: do not set a tile (or use tile 0 / an "empty" tile with no art) but keep FLAG.BLOCK so the edge still blocks (or an invisible wall). Give each scene a dark background colour so the void reads as nothing (the memories in Godot used per-memory dark paper colours, LevelBase _paper_params: use those). screens.ts map() uses paperTile to make the void transparent on the world map (palette `${paperTile}:#00000000`); keep that working. Then the back-ledge logic (V-02) must treat empty cells as "lower ground" so the edge of the land gets its outline.
Check	Screenshots of all 27 shots_test spots show no beige tiles; you still cannot walk off the land.

Overworld, the Margins: the beige paper tile fills the gaps between grass areas and runs to the map edge.

Pip's memory: the parchment floor is almost the same colour as the paper void, so you cannot tell floor from nothing.

V-02 [P0] Thicker, darker back-ledge lines (all floors)

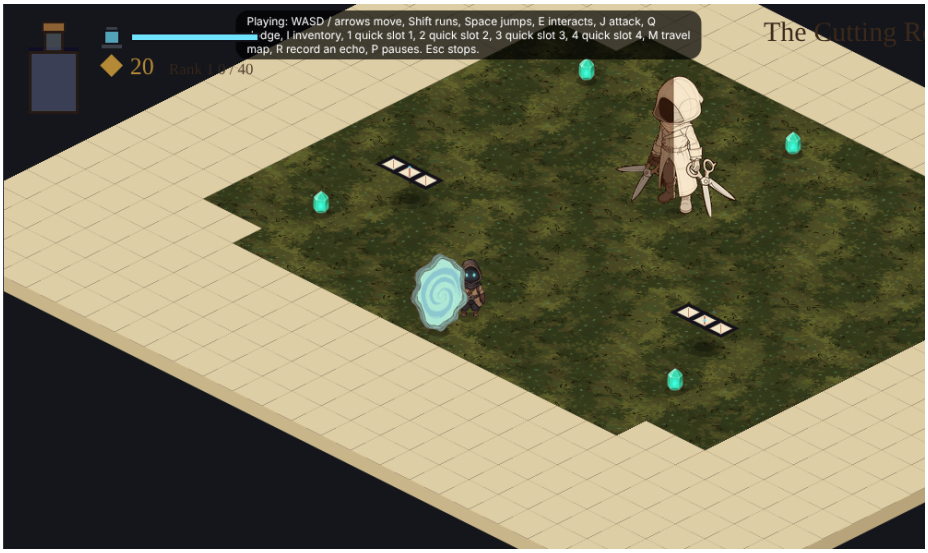

Cause	tools/art/ludo_ledges.py outline_edges draws a **one-pixel** line at STRENGTH 0.8 toward a dark of the tile's own colour. ludo_retile.py only outlines OUTLINED = {cobble, slate, flagstone, planks, parchment}: **grass/meadow/moss floors get no line at all**, which is why raised grass back edges are hard to see.
Do	Make the line 3 px (2 px dark + 1 px lighter highlight inside it), STRENGTH 1.0, a near-black ink brown (#2b1d12) rather than a shade of the floor. Add meadow, grass, moss, dirt and every other floor to OUTLINED. variant_of() compares heights of x-1 and y-1; also outline where the neighbour is void (V-01) and at map borders. Rebuild with run_porter.sh (the Ludo pass).
Check	In shots_test overworld_margingate and pip_lastpage, every raised back edge has a clear dark line; flat ground shows no grid.

Margin Gate area: the back edges of raised grass have no line; the edge blends into the beige void.

V-03 [P0] Draw order (things drawn over the player)

Seen	Cutting Room: the portal draws over the Storytender standing beside it. Pip Last Page: the wooden story gate and the big book draw over her. Proof Room: the huge redaction bar draws over a portal. Maud cellar: the "dough" word label draws over her. Folio Heights: sentence-stone signs draw over each other.
Cause	Sprites sort by feet position + sortOffset (porter.ts picture height helper "How tall a picture stands, in levels ... for draw order"). Tall/wide pictures (gates, portals, bars, signs) have feet set at the picture bottom, not at their ground footprint, so they win the sort when the player is just behind or beside them. Labels (textBlock) are drawn on top of everything.
Do	For each wide object set its sort point to its real footprint (the back-most cell it covers for a wall-like gate; centre for a portal) and its sortOffset to 0. Labels and word text: draw them in the object's own layer, not an overlay, or hide them when the player is behind. Add a test that places the player one cell behind and one cell in front of each object type and compares screenshot pixels at her head.

Cutting Room: the portal is drawn over the Storytender; floor is meadow grass (should be the editorial floor); beige void around.

Pip Last Page: the gate and the book draw over her.

V-04 [P1] Double words on word blocks and stones

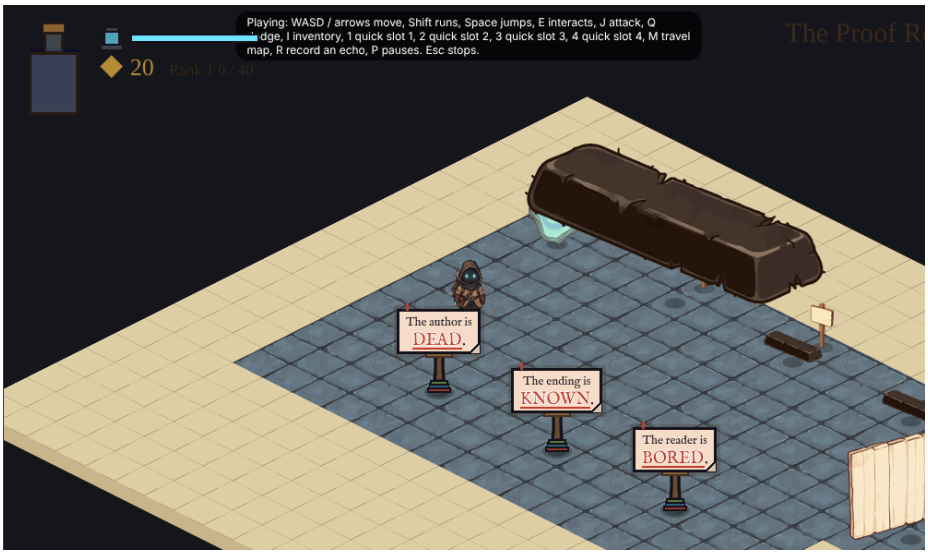

Seen	Maud: each block shows a big outlined word AND a small word ("SERVE" + "SERVE", "dough" + "DOUGH", "BREAD" + "BREAD"). Pip: sentence stones show tiny outlined text "The door is [LOCKED]." that is hard to read.
Do	Use one label: the word_* block art from Ludo (WIRING_REPORT: unwired) with the textBlock text hidden, or the text alone on a plain block. Pip stones: a bigger plaque with dark text on light, sized to the sentence.

Maud, the hall: doubled words on every block; light paper void.

V-05 [P1] Proof Room redaction bar is giant

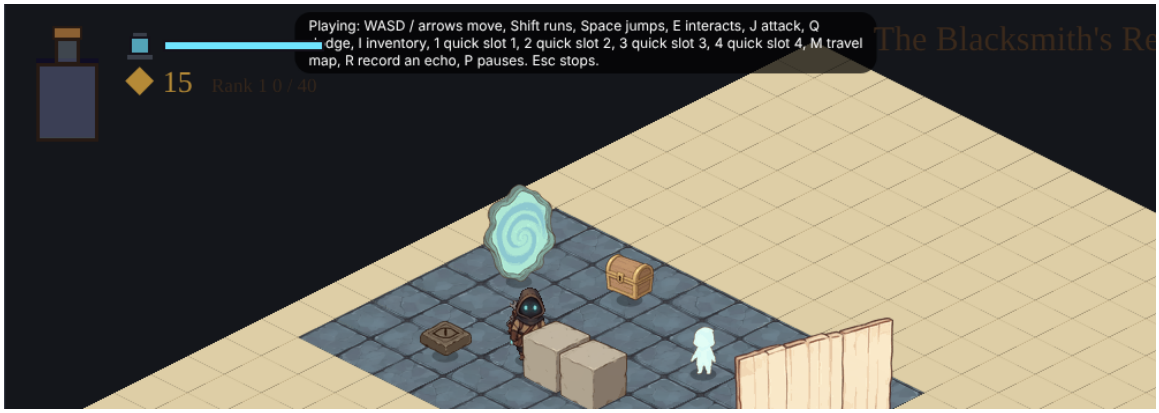

Do	Scale the bar to 3 cells x 0.7 like the forge bar; it now covers a portal.

Proof Room: the bar is drawn many times its size and covers a portal.

V-06 [P1] HUD readability

Seen	The ink bottle top-left draws as an empty dark box (no ink level). "Rank 1 0 / 40" is dark brown on the dark void and hard to read. The region name top-right is cut off ("The Old Mea...", "The Folio Hei..."). The interact hint ("E: light the lantern") is tiny and sits on the player. In the editor the "Playing: WASD..." help bar covers the HUD (editor only; ignore for the exported game).
Do	screens.ts hud(): bottle fill bound to ink/ink max; light text with a dark outline or a parchment plate behind rank and Mnemosynth; region title right-aligned inside the screen; bigger hint with a backing plate above the object, not the player.

Forge start: empty ink bottle, unreadable rank, clipped region title.

V-07 [P2] Signs crowding and overlapping

Do	Folio Heights and Smudge: the sentence-stone signs are large and overlap each other and the player. Shrink them or space them (and fix their draw order, V-03).

Folio Heights: three sign posts drawn over one another.

V-08 [P1] Scene floors and backgrounds

Do	Cutting Room floor should be the editorial floor (docs/dungeon_plans/scissor_editorial_floor.png), not meadow. Memories need their own dark backgrounds (V-01). Stairs on the overworld draw as flat green stripes: use stair art (A-05). Plot holes are a black diamond grid that looks like void: give them a torn-page hole look (A-06).

V-09 [P2] Restoration look

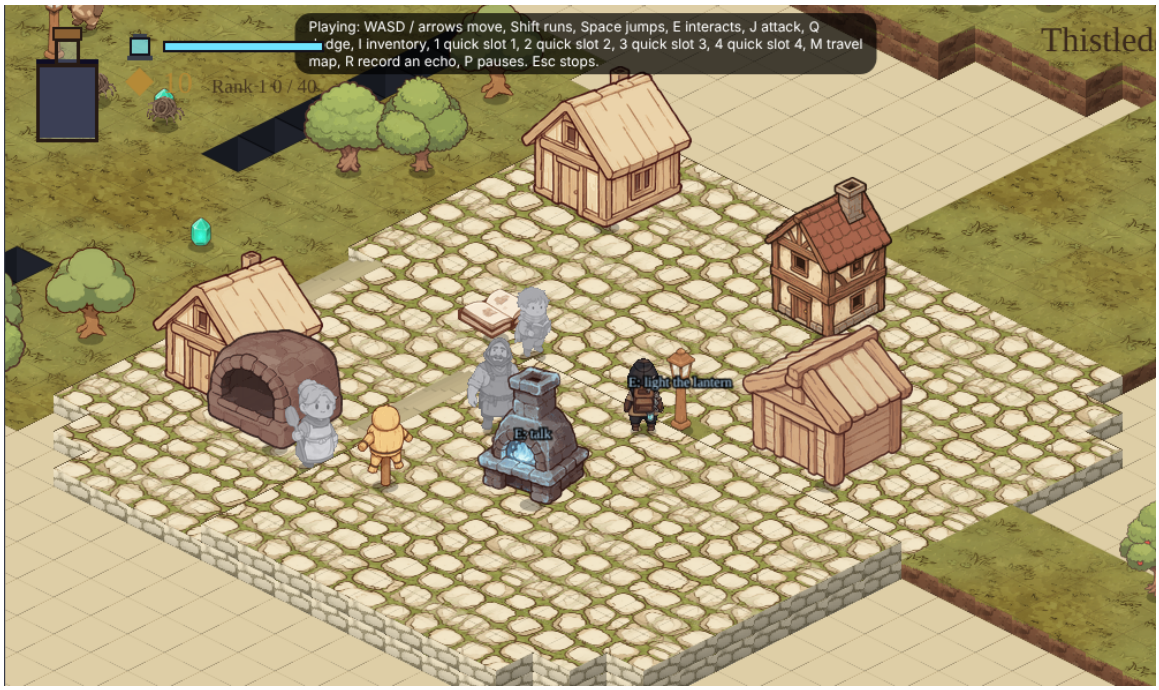

Do	Ghost (graphite, faded) versions of town tiles, houses, forge, sign; NPCs as "Lorem Ipsum" placeholders until their wave. Check every ghost prop in Thistledown has a coloured twin (Ludo house ghosts are unused, WIRING_REPORT).

7. Art still to make (A)

Make these with Ludo (the owner has an account; art/LUDO_PLAN.md and art/ART_GUIDE.pdf give the prompts and the style). Style: hand-inked cel shading, warm parchment palette, 64 x 32 iso tiles, props drawn from the same 2:1 iso angle, dark ink outlines. Save results in art/incoming2/ and wire them in tools/art + porter.ts. Items marked (WR) come from art/incoming2/WIRING_REPORT.md.

ID	Art	Notes
A-01	Parchment floor that tiles (WR)	Current parchment does not tile and matches the void colour; make it clearly a floor (darker, with page lines) - Pip, side rooms.
A-02	Meadow / grass tops (WR)	Current meadow is dull olive with lost tufts and faint diamond seams between tiles. Brighter green, tufts, seamless.
A-03	Cobble seam fix (WR)	Cobble seam is mirrored; redo so the tile repeats cleanly.
A-04	Dirt, flagstone, side_* cliff faces (WR)	Made but unused: wire them, or redo where they do not fit.
A-05	Stairs / ramps	Grass stairs and stone stairs for all four directions (now flat green stripes).
A-06	Plot hole	A torn-page hole with paper fibres at the rim, darker inside.
A-07	Story gate with its word (WR)	The storygate lost its word: gate art with a blank plaque the textBlock word sits on; open version (gate_open is unused: wire it).
A-08	Word blocks word_* (WR)	Unwired; wire and remove the duplicate text (V-04).
A-09	Redaction bar (WR)	Current is a low slab/log; a black ink bar with ragged edges, 3 cells long, plus a fading version.
A-10	Stone block for slate floors (WR)	block_stone is beige and clashes on slate; grey variant.
A-11	Table (WR), dough, patch, scissors (WR)	Table too chunky; dough/patch/scissors drawn but unused (Maud, Cutting Room).
A-12	Intro book spreads	6 spreads (idea, tender, editors, doodle, you, blot) for S-01, or reuse the Godot spreads.
A-13	Villagers in all directions (WR)	Villagers only have the SE view and do not turn; 4 or 8 directions + walk.
A-14	Scissor-Man animations (WR)	Cut and jammed poses unused; need telegraph, cut, jammed, hurt, defeat. Plus cut-line and patch effects.
A-15	Weighing tokens, weights, Locket, hourglass (WR)	For S-07.
A-16	Ellipsis, Dangler crops (WR)	Pictures are cropped; redo with margin.
A-17	Rift	A tear in the page, glowing edges, for S-02.
A-18	Echo ghost tint, toast and narration panels, boss bar frame, ink bottle fill	UI pieces for M-01 / M-13 / V-06.
A-19	The First Sword (WR)	Not seen in screenshots; check it shows on the anvil, redo if too small.
A-20	Monocle, Thimble, hourglass_of_drafts item icons	Rewards of the side rooms and the Scissor-Man.

8. Reference screenshots

Thistledown square: this is the look to aim for elsewhere (clear floors, readable props, ghost NPCs). Note the hint text over the player.

9. Suggested order of work

Step	Tasks	Why first
1	V-01 void tile, V-02 ledges, M-03 collision	Quick wins the owner noticed; every later screenshot looks right.
2	M-01 echo feedback + toasts (part of M-13), M-02 censor bars	The owner thought these were broken.
3	M-06 crumpling, M-07 binder/items, M-08 save/Continue	Basic game loop must survive death and quitting.
4	S-06 puzzle sites, S-05 riddles	Opens the overworld chests (rewards, renown for the gate).
5	S-02 rift, S-03 Scissor-Man, S-04 publish, Margin Gate	The end of the Prologue.
6	V-03 draw order, V-04 labels, V-06 HUD, V-05, V-08	Look and readability.
7	S-07 side rooms, S-01 intro, M-09 Index, M-10 ranks, M-11, M-12, S-08	Faithful port.
8	Art A-01..A-20, V-07, V-09, M-04 performance	Polish.

Definition of done for the Prologue

- A new game can be played from the intro book to the opened Margin Gate without test shortcuts: all 17 beats, the 3 memories, the Cutting Room, publishing the town.
- Every overworld chest can be opened; every gate, bar, stone and plate does what FLOW_SPEC says.
- Crumpling, falling, saving, Continue, resting and fast travel all work.
- No beige void, clear ledges, nothing drawn over the player that should be behind her.
- All tests pass, including new ones for each task, with 0 script errors. Push to all-merged with a short report of what was checked.

Known test results at the time of writing

```
play_test   12 pass 0 fail      combat_test 12 pass 0 fail
forge_test  11 pass 0 fail      pip_test    12 pass 0 fail
maud_test   12 pass 0 fail      echo_test    1 pass 0 fail
tour_test    6 pass 8 fail (creep/lantern speed, pit, crumple, binder use,
             equipment, Margin Gate, Proof Room door, save/Continue)
```
